

## Support Clean Air and Water

### FACE December 2011

#### Our challenges

From the outset, it was clear the EMC's and Plant Washington enjoyed support from local leaders and had vast financial resources behind it.

**At first it was inconceivable for all of us at FACE that here we were in the 21st century and companies were still forcing communities to accept their brand of progress at the expense- and health- of the surrounding citizens.**

Perhaps one of the most egregious attitudes that emerged, and continues today, is that for many people the promise of jobs – any job – trumps concern for the environment, health, or financial risks the plant might impose on our community.

As reports indicate, many of the jobs promised by P4G are unlikely to materialize. But the *cost* of jobs created - costs in higher electric rates, in medical expenses, in closing our community to future jobs because this plant will push our limits on air quality and water usage – place the price tag for this plant out of reach.

*Donate today to keep  
our community healthy*

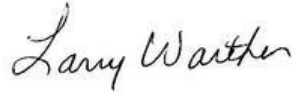

Unfortunately, this is a message few are ready to hear.

**[Will you please consider a gift this holiday season to support the work of FACE in 2012?](#)**

Your gift will allow us the ability to continue to educate and advocate for the community and engage our neighbors, friends and family in our future.

Yours truly,

Larry Warthen, FACE President
